Digitize

Visualize

Improve

Logitan is an IoT tool and service that help improve warehouse operations with smartphones and web. Logitan is developed by NXLRIC and patented in Japan (#6007288). Three "simple and easy" - Preparation, Recording and Analysis visualize your operation quicker and in less expensive way.

Flexible to set up Activity buttons

Just one tap when alerted

Fast data collection accelerate quick analysis

Research and Survey

NXLRIC's researchers and consultants provide the newest, precise and profound information, analysis and recommendation for your business decisions.

- Research on new technologies and their impact
- Logistics 3CE in overseas markets
- Evaluation and feasibility study of location and facilities
- Customized research and survey

NXLRIC's two open surveys are published quarterly and used as a benchmark by many Japanese companies to evaluate and plan their supply chain and logistics strategies.

- National Freight Transport Survey
- Short-term Survey of Freight Movement in Japan

Package Performance & Shipping Testing

NXLRIC has a testing laboratory with necessary equipment, where we can conduct ISO-based packaging performance and shipping testing. Our experienced engineers take care of pre-consultation and testing and issue test report for each order. Testing with actual cargo is also available. Shock, temperature, humidity and other parameters are recorded with various sensors. With test results, we provide consultation and advisory services.

Training and Education

For supply chain and logistics industry to become more efficient and profitable, education is always on top of the list. Because it is people that deliver value to customers. NXLRIC shares deep knowledge and know-how through seminars, online education, customized education programs.

- Logistics Project Management Program
- Traffic Operation Manager Exam Preparation Program
- Business Career Exam (Logistics Management and Operations)
- Seminars
